V-THREAT-FIRE®

V-Threat-Fire® is a patented electric feedback device that greatly enhances training by bringing real-life consequences into the simulation. This product's electric impulse can be used to simulate gunfire, explosions, dog bites and more—making training more realistic and powerful.

Adjustable: Electric impulse is wirelessly adjustable from 0.2 to 1 second

Powerful: Electric impulse or vibrations can penetrate multiple layers of clothing

Consequences: Instructors can program the V-Threat-Fire to vibrate or release electric impulses

Enhances Training: Electric impulses or vibrations add stress and consequences to training

Environmentally Friendly: Powered by a rechargeable battery pack

Lightweight: Compact, light and durable. Easily attached to the belt area

Safe: No eye protection necessary. Fail-safe impulse protection

Simple: No aiming required, allowing the trainer to focus fully on the trainee

Wireless: Allows freedom of movement inside and outside of the simulator. Adjustable from 50ft away

V-Threat-Fire requires no aiming, no cleanup and has low risk of personal injury. Unlike other forms of simulation distraction, the V-Threat-Fire delivers a more powerful, realistic consequence.

VirTra holds the only patent for electrical stimulation within a simulation.

U.S. Patent No. 8,016,594
U.S. Patent No. 8,267,691

V-Threat-Fire® in Action
